

## High Dynamic Range Photography—Part II

High Dynamic Range (HDR) photographs are a combination of images taken of the same scene but at different exposure settings. Special software such as Photomatix is used for processing and results can be either very dramatic or so-so, depending on skill and/or luck.

- Shoot RAW images

The entire power point presentation which details multiple ways to make your HDR photos even more dramatic can be found on the [EIPS website](#).

Saloon © Michael Fryer

### Basics of HDR:

- Use your tripod and shoot still subjects. Use your aperture priority mode (f stop) to get important stuff in focus.
- Use ISO 100 to reduce noise in process.
- Turn on auto-bracketing -2.0 plus 2 stops.
- Continuous shooting with remote trigger

## *Photography Opportunities:*

On February 3, 2011 our regular meeting will be a photo shoot at Good Samaritan society—Idaho Falls Village. We will have lights and some glassware to photograph. Bring your camera, tripod and any still life you wish to photograph. We will also have some back drops, but they will be limited.

The Ashton Dog races this year will be held February 17th, 18th, & 19th of 2011. EIPS members will go for the fourth time to photograph the races on Saturday February 19th. Everyone has enjoyed the previous trips and we are going by request of members. We will leave the

Fred Meyer parking lot at 7:30. This will allow plenty of time to get to Ashton in time for the start of the race at 8:30. We will plan on sharing rides.

[Parking](#) to shoot start of race.

First [location](#) to photograph race.

[Location](#) to photograph race with Tetons in the background

[Location](#) to photograph the balance of the race.

[Alternate parking](#) at a church (requires a 2 block walk to location races begin.

The field trip to photograph

barns has been delayed until April or May because of snow.

This trip to photograph barns near Idaho Falls will be a repeat of a previous field trip. [Here](#) are some barn images from that previous field trip. Some of these barns no longer exist that are on the [barn maps](#). Roger Heng is working on a new [barn map](#). This map is incomplete and you may need to move down and/or to the left to see all the barns. There may also be some errors as of 12-6-10 in the gps coordinates. Meeting time and place is still to be determined.

OUR FIELD TRIP  
 COORDINATOR IS  
 LOOKING FOR  
 SUGGESTIONS FOR  
 FUTURE FIELD TRIPS.  
 PLEASE CONTACT  
 MELVIN COOK AT  
[FIELDTRIP@EIPS.NET](mailto:FIELDTRIP@EIPS.NET)  
 WITH ANY  
 SUGGESTIONS.
